# ■ Applications

Interior automotive lighting (dashboard backlight etc...)

Optical indicators

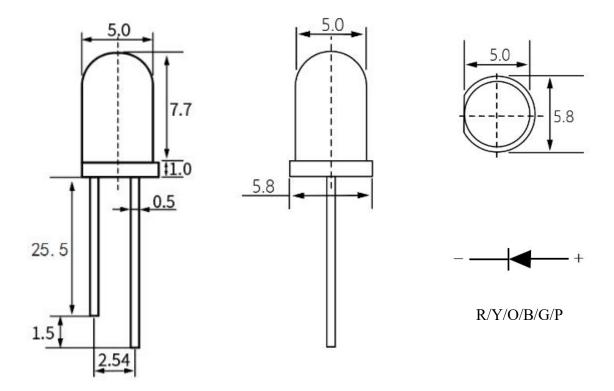

**Communication Products** 

Backlighting

Flash

Toy

# ■Package Dimensions

### Notes:

- 1. All dimensions are in millimeters.
- 2. Tolerance is  $\pm 0.20$ mm unless otherwise noted.
- 3. Protruded resin under flange is 1.0mm max
- 4. Lead spacing is measured where the leads emerge from the package.
- 5. Caution in ESD:

Static Electricity and surge damages the LED. It is recommending to use a wrist band or anti-electrostatic glove when handling the LED. All devices, equipment and machinery must be properly grounded.

■ Absolute Maximum Ratings ( $Ta = 25^{\circ}C$ )

Parameter	Symbol Colour Value		Value	Unit	
Barrara Disabaration	D.I	Red/Yellow/Orange	72	117	
Power Dissipation	Pd	Blue/Green/Purple	102	mW	
Peak pulsing current (1/8 duty f=1KHz)	Ifp	Red/Yellow/Orange/Blue/Green/Purple	60	mA	
Forward Current	If	Red/Yellow/Orange/Blue/Green/Purple	20	mA	
Operating Temperature Range	Тор	Red/Yellow/Orange/Blue/Green/Purple	-25 ~ +80	°C	
Storage Temperature Range	Tstg	Red/Yellow/Orange/Blue/Green/Purple	-30~ +85	°C	
Junction Temperature	Tj	Red/Yellow/Orange/Blue/Green/Purple	115	$^{\circ}\mathrm{C}$	
Electrostatic Discharge	ESD	Red/Yellow/Orange/Blue/Green/Purple	2000(HBM)	V	
Lead Soldering Temperature	260°C for 3 Seconds				

# ■ Typical Electrical & Optical Characteristics (Ta = 25°C)

Parameter	Colour	Symbol	Min.	Тур.	Max.	Unit	Test Condition
Forward Voltage	R/Y/O	V.E.	2.0	2.2	2.4	V	IF=20mA
	B/G/P	VF	2.8	3.0	3.4		
Viewing Angle	R/Y/O/B/G/P	201/2		15		Deg	IF=20mA
Reverse Current	R/Y/O/B/G/P	Ir			10	μΑ	Vr=5V

### ■ Dominant Wavelength Guide ( $Ta = 25^{\circ}C$ )

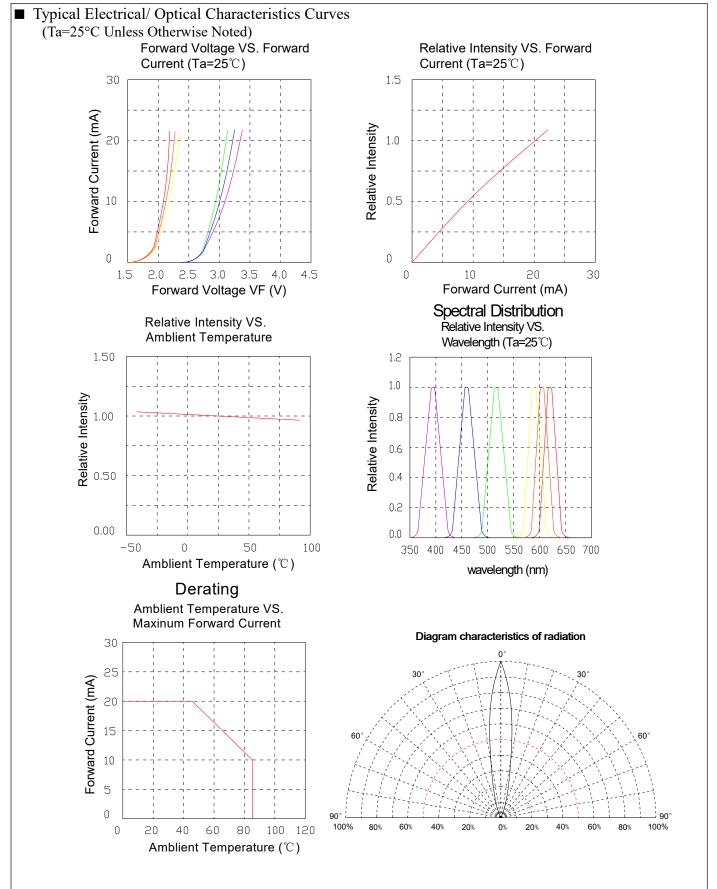

Colour	Symbol	Min.	Тур.	Max.	Unit	Test Condition
Red	$\lambda_{\mathrm{D}}$	620	625	630	nm	IF=20mA
Yellow	$\lambda_{\mathrm{D}}$	588	590	594	nm	IF=20mA
Orange	$\lambda_{\mathrm{D}}$	600	605	610	nm	IF=20mA
Blue	$\lambda_{\mathrm{D}}$	460	465	470	nm	IF=20mA
Green	$\lambda_{\mathrm{D}}$	515	525	535	nm	IF=20mA
Purple	$\lambda_{\mathrm{P}}$	360		420	nm	IF=20mA

# ■ Luminous Intensity/Light Intensity Guide( Ta = 25°C)

	-	·	•			
Colour	Symbol	Min.	Тур.	Max.	Unit	Test Condition
Red	IV	1500	2500	3500	mcd	IF=20mA
Yellow	IV	1500	2500	3500	mcd	IF=20mA
Orange	IV	1000	2000	3000	mcd	IF=20mA
Blue	IV	5000	9000	13000	mcd	IF=20mA
Green	IV	15000	22000	30400	mcd	IF=20mA
Purple	IV	300		10000	mcd	IF=20mA

### ■ Notes:

1. Tolerance of measurement of luminous intensity:  $\pm 15\%$ 2. Tolerance of measurement of dominant wavelength:  $\pm 1.0$ nm3. Tolerance of measurement of forward voltage:  $\pm 0.1$ V

Note: The data shown above are typical curves. Every LED component may have some variations of characteristics.

### **■** Test Items and Conditions:

No.	Test Item	TJ. Standard	Test Conditions	Note	Number of Damaged
1.0.	测试项目	腾杰参照标准	测试条件	频次	允许破坏数
01	Temperature Cycle 高低温循环	JIS C 7021 (1977)A-4	-25°C 30min ↑↓5min 80°C 30min	100 cycle	0/22
02	Thermal Shock 冷热冲击测试	MIL-SLD-107D	-25°C 15min ↑↓5min 80°C 15min	50 cycle	0/22
03	High Humidity Heat Cycle 高温度热循环	JIS C 7021 (1977)A-5	30°C ⟨=⟩ 65°C 90%RH 24hrs/1cycle	10 cycle	0/22
04	High Temperature Storage 高温存储	JIS C 7021 (1977)B-10	T <sub>a</sub> =80°C	1000 hrs	0/22
05	Humidity Heat Storage 高温高湿存储	JIS C 7021 (1977)B-11	T <sub>a</sub> =60°C RH=90%	1000 hrs	0/22
06	Low Temperature Storage 低温贮藏	JIS C 7021 (1977)B-12	T <sub>a</sub> =-30°C	1000 hrs	0/22
07	Life Test 常温寿命测试	JIS C 7035 (1985)	T <sub>a</sub> =25°C I <sub>F</sub> =20mA	1000 hrs	0/22
08	High Humidity Heat Life Test 高温高湿寿命测试	0	60°C RH=90% I <sub>F</sub> =20mA	500 hrs	0/22
09	Low Temperature Life Test 低温寿命测试	0	Ta=-25°C I <sub>F</sub> =20mA	1000 hrs	0/22

<sup>●</sup> Refer to reliability test standard specification for in this line. 请参考可靠性测试标准规范

### **■** Criteria For Judging Damage:

	Criteria 1 or Judging Damage.							
No.	Test Item	Symbol	Test Conditions	Decision criteria				
NO.	测试项目	符号	测试条件	判定标准				
01	正向电压	<b>V</b> 7	T —T	初始值±10%				
01	Forward Voltage	$ m V_F$	$I_F = I_{FT}$	Initial Data±10%				
02	反向电流	т	V 5V	I < 10 A				
02	Reverse Current	$I_R$	$V_R=5V$	$I_R \le 10 \mu A$				
	光强			平均 I <sub>V</sub> 衰减≦30%,单个平均 I <sub>V</sub> 衰减≦50%				
03	Luminous Intensity	${ m I}_{ m V}$	$I_F = I_{FT}$	Average $I_V$ degradation $\leq 30\%$ Single LED $I_V$ degradation $\leq 50\%$				
	耐焊接热		<u> </u>	材料无内部裂痕、无材料间爆裂、剥离、无死灯				
04	Resistance to			Meterial without internal cracks, no material between stripped, no				
	Soldering Heat			deaded light.

# ■Precaution of Application 应用预防措施

### 1: Circuit layout

Due to the forward voltage of LED will vary with temperature and its driving current, the current-limited protective circuit should be considered in the LED circuit design.

When LEDs are arrayed as parallel circuit, different inherent resistance of LED will cause unbalance current. The unbalanced driving current which exists in every parallel circuit may make LED to be driven at different power. Therefore, the LED driven at higher power may be damaged by over driving current, and the LED driven at lower power may be dimmer than the others.

To solve this situation, a suitable resistor is recommended to put in series with each LED circuit. The resistor will limit and balance the driving current which flows through every parallel circuits.

### 2: Electric Static Discharge (ESD) Protection

All kinds of LED materials, such as GaP, AlGaAs, AllnGaP, GaN, or InGaN chips, are STATIC SENSITIVE device. ESD protection or surge voltages shall be considered and taken care in the initial design stage, and whole production process.

The following protection is recommended:

- (1) A wrist band or an anti-electrostatic glove shall be used when handling the LEDs
- (2) All devices, equipment and machinery must be properly grounded

If LED is damaged by ESD or surge voltage, damaged LED may show some unusual characteristics. It may appear leakage current, and LED does not emit at low current.

And when using microscope to inspect damaged LED chip at low driving current, it may have some black dots within the emitting area.

### 3: Pick and Place

### The following items should be paid attention in assembly process:

- (1) It should be avoided to load stress on the resin during pick and place process, especially at high temperature.
- (2) Avoid rubbing or scraping the resin by any object, and avoid leaving fingerprints on the lens.
- (3) Electric-static may cause damage to the component. Please confirm that the equipment is grounding well.

#### 4: Storage

It's recommended to store the products in the following conditions:

(1) Shelf life in sealed bag: 6 months at  $T_A$ <40°C and Hum.<30%RH.(Base on aluminum laminated moisture

barrier bag.)

(2) After the package bag is opened and kept in the following environment, the LED products should be used

completely as soon as possible:

Humidity (Hum.): 60%RH Max.

Temperature  $(T_A): 5^{\circ}C \sim 30^{\circ}C (41^{\circ}F \sim 86^{\circ}F)$ 

Assembly duration: within 10 today, after bag is opened.

If the some of LED are not used, they need to be kept at Hum. ≤30%RH in zip-locked sealed bags.

Please avoid rapid transitions in ambient temperature, especially in high humidity environment where

condensation can occur.

5: Cleaning

An alcohol-based solvent such as isopropyl alcohol (IPA) is recommended to clean the LED, after soldering process, if cleaning is necessary. Before cleaning, a pre-test should be done to confirm whether any damage to the

LEDs will occur.

It is not recommended to use unspecified chemical liquids as cleaning material for cleaning the LED. It's also not recommended to use ultrasonic power to clean the LED device. The chemical and ultrasonic power could harm the

LED devices.

6: Manual Soldering and Rework

The manual soldering process is not recommended for quality consideration. When it is absolutely necessary, the

LEDs may be mounted in this fashion but the user will assume responsibility for any problems.

The the following conditions are recommended:

(1) Soldering material: SN60 (60% tin and 40% lead) solder or solder with silver content is recommended.

(2) Temperature of the iron: lower than 300°C

(3) Soldering time: maximum 3 seconds

(4) Operation cautions:

8

- Please avoid overheating of LED component in any process. Overheating may damange the LED package.
- Please don' t place any stress on the lens of LED, especially at high temperature

## 7: Application

- (1) The strong light from LEDs may injure human eyes. Precautions should be taken to prevent looking directly at the LEDs with unaided eyes.
- (2) In order to get maximum light output during the duration of LED's long life, designer should consider how to make excellent thermal dissipation when making the whole system design. It's recommended to avoid intense heat generation and to operate within the maximum ratings given in this approval sheets.
- (3) Every piece of LED will be sorted and LEDs with the same binning grade will be taped into the same reel or put into the same bag. It is recommended to use the same bin-grade LED to assembly the unit module. This will ensure the LED unit module with good uniformity of brightness, hue, and so on.
